# Introduction

CSS Grid is a powerful two-dimensional layout system that allows you to create complex and flexible layouts with rows and columns.

# Difference between grid and flex

Property	Grid	Flexbox
Dimension	Two – Dimensional	One – Dimensional
Features	Can flex combination of items through space-occupying Features	Can push content element to extreme alignment
Support Type	Layout First	Content First

# Advantages of Grid

- Flexibility
- Simplicity
- Precise positioning
- Accessibility
- Debugging

# Disadvantages of Grid

- Browser support
- Learning curve
- Complexity
- Over-reliance
- Accessibility
- Compatibility with other layout methods
